Location
Skopje

Start Date
by agreement

Working Time
Fulltime

Entry as
Work experienced

Company
Laigo Germany

Become a member of a German high tech company that changes the way we use Artificial Intelligence!

JOB DESCRIPTION

Creating something new!

As a System Administrator you will have the chance to set up, monitor and maintain a modern IT infrastructure. Our system is based on a self-made infrastructure with open source and Linux systems.

RESPONSIBILITIES

- Integration and networking of hardware and software
- Design, implementation and monitoring of IT systems with monitoring solutions
- Installation and configuration of networks (Firewall, Proxy, Router)
- Administration of modern Linux systems
- Troubleshooting with the help of modern diagnostic systems
- Assistance with user care and support
- Administration of virtual environments (Docker, Kubernetes)
- Installation and configuration of system environments (like backups, services,...)

REQUIREMENTS & SKILLS

- Ideally a secondary school diploma or university entrance qualification
- Specialised in computer science, especially in setting up systems and networks
- Experience in automated deployment (DevOps – Pipeline) of services (Kubernetes, Docker, or other technologies)
- Knowledge of Linux-Systems
- Motivated, willingness to learn and analytical thinking skills
- Strong communication skills and ability to work within an international team
- Personal initiative, which we are happy to encourage
- Very good English language skills (German skills are an advantage)
